## Class Project => a peaceful revolution to restore the constitution

In Federalist paper 45, the author of the Constitution, James Madison stated: "The powers delegated by the proposed Constitution to the federal government are few and defined. Those which are to remain in the State governments are numerous and indefinite."

So what if by applying this principle we, this class, can return the way our government operates to vision Madison held for it? The proposal also has a payoff to proponents of a strong central government, the end to global warming. (I presume a high percentage of supporters believe in the acts of man are causing global warming). The end result of the project should unite us - free energy from the sun and all of the driving public will wind up moving about in their new Teslas.

Consider this -> by applying the principle Madison expressed cited above we can all get something we want. Bumps along the way because the method may not at first glance appear to be the correct action but by focusing on the end goal I think we will come up with a single outcome that we all will can agree on out of the very many opinions we all have now.

So how is this idea a revolution? According to Madison the existence of the EPA at all is beyond the bounds of the federal government to create. The courts have been granting the executive branch of the government unlimited authority to create administrative law and therefore if we the people can beat the EPA then federal power starts to return to the bounds Madison and our founders intended.

This revolutionary action is constitutional, makes America energy independent, and energy becomes both free and zero cost for the world. So conservatives will like the price of energy (free) and big government advocates will like the idea that renewables are the overwhelming sole source of energy.

### Steps

The EPA is making war on coal and this is costing jobs in Kentucky and other coal mining states. Coal can cleanly converted into gasoline and diesel with side byproducts of electricity and captured CO2.

The CO2 can be recycled back into gasoline and diesel. This means the transportation is still putting CO2 into the air but fracking gets minimized and we can stop all imports of crude from OPEC using American coal. Net CO2 emissions go down, the price of energy goes down and the financing of terrorism goes down as well so we have to spend much less on the military.

We appeal to the voters of the commonwealth of Kentucky to finance the creation of these conversion plants. Applying the Kevin Bacon principle with just the members of this forum can through their network contact every voter in Kentucky to pass an initiative in their state to finance the project. Under our proposed state law Kentucky winds up with gasoline at less than \$2/gallon since they paid for the coal and the conversion plants and they export their excess gasoline to other states at world market prices.

Anticipating the EPA will try to through roadblocks to a project that is entirely within a state's boundary, emits zero CO2 and does not inject chemicals into the water here is how we expand the project and beat their control.

In the law passed by the voters of Kentucky, if there is ever filed a lawsuit trying to halt the project (plants would be built to code) then the location of the conversion plants can be moved, including outside Kentucky boundaries.

It is still legal to export coal. The EPA is just making it illegal to burn coal in the USA (and I wouldn't want to live right next door to a coal burning power plant either regardless of it passing standards). So my idea on how to beat the EPA, defeat OPEC, and save the constitution runs this way.

With the passing of NAFTA, it is possible for Americans to legally own real estate in Mexico. What we do is grind Kentucky coal into a very fine small size and mix it with water and send it to Mexico = process called coal slurry and makes for easy transportation of the coal. Kentucky still gets the benefit of the cost of gasoline, jobs mining coal and sales of electricity into the grid. But since the coal is converted into gasoline and electricity outside the USA the EPA has no power to limit the project.

The water used in the transport process otherwise would just flow down the Ohio and to the Gulf anyway where it becomes worthless. But in this case the water in Northern Mexico may be worth even more than the coal for irrigation. An acre of Imperial County that is dry is nearly worthless and you have to pay tax on it. Irrigate that acre and it can go for more then \$15,000 because of the 12 month growing season.

So hundreds of thousands of acres of northern Mexico could thus be purchased and irrigated through this process creating middle class jobs for Mexicans. A strong middle class in Mexico would halt the drug trade and illegals living in the shadows here in America will return to Mexico for higher paying jobs there.

The Kentucky law would also have the option at the pump for motorists to invest of 10cents/gallon (or other amount) for the creation of space based solar or other renewable project. Space based solar offers the means to provide 100% of the world's energy to all the people of the world for free - the

vision of Tesla.

Right now if you buy a Tesla you are running in on coal - close to 50% of our electricity comes from coal. Going all solar means at some point all our energy comes from the sun and costs close to nothing. During this transition from carbon based power to all solar Kentucky shifts from coal to electricity and has an ample budget to become a high tech center for programming and the conversion of their coal into graphene.

The key is that this is a state action as Madison envisioned, it trumps the EPA and beyond state power it installs power back to the individual voters- who right now have zero representation by either party. So we trump partisan politics and parties as well.

Once this idea works we can figure out how to trim back every federal program up to defense.

Amusing! How about a class project to protect the constitution from the lies and assaults of the tea cakes and the so called libertarians? Now that would be useful.
